Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently amended): A process for producing a color-stable, low-impurity tocopherol compound or mixture of tocopherol compounds comprising:

- (a) providing a protecting group-substituted tocopherol compound;
- (b) purifying the protecting group-substituted tocopherol compound by crystallizing it from a crystallization solvent and collecting the crystallized compound; and
- (c) solvolyzing the purified compound to form free tocopherol.

Claim 2 (Original): The process according to claim 1, wherein the solvolyzing is carried out under an inert atmosphere.

Claim 3 (Original): The process according to claim 2, wherein the inert atmosphere comprises nitrogen.

Claim 4 (Currently amended): The process according to claim 1, wherein the protecting group-substituted tocopherol compound ~~comprises~~ is an ester.

Claim 5 (Original): The process according to claim 4, wherein the ester is selected from the group consisting of an acetate, a succinate, a phosphate, a phosphinate, a sulfonate and a carbonate.

Claim 6 (Currently amended): The process according to claim 4, wherein the ester ~~comprises a compound~~ is selected from the group consisting of an acetate and a succinate.

Appl. No.: 10/626,281

Amendment dated May 2, 2005

Reply to Office Action of November 1, 2004

Claim 7 (Currently amended): The process according to claim 4, wherein the ester ~~comprises~~ is an acetate.

Claim 8 (Original): The process according to claim 1, wherein the tocopherol compound comprises α -tocopherol.

Claim 9 (Original): The process according to claim 8, wherein the α -tocopherol is present in an amount of at least about 80% by weight based on the total tocopherol content.

Claim 10 (Original): The process according to claim 1, wherein the tocopherol compound comprises *d*- α -tocopherol.

Claim 11 (Original): The process according to claim 10, wherein the *d*- α -tocopherol is present in an amount of at least about 80% by weight based on the total tocopherol content.

Claim 12 (Currently amended): The process according to claim 1, wherein the tocopherol compound ~~comprises~~ is a natural-source tocopherol.

Claim 13 (Currently amended): The process according to claim 12, wherein the protecting group-substituted tocopherol compound ~~comprises~~ is an ester.

Claim 14 (Currently amended): The process according to claim 13, wherein the ester ~~comprises~~ a compound is selected from the group consisting of an acetate and a succinate.

Claim 15 (Currently amended): The process according to claim 13, wherein the ester ~~comprises~~ is an acetate.

Claim 16 (Canceled)

Claim 17 (Currently amended): The process according to claim 16 1, wherein collecting the crystallized compound ~~comprises~~ is by filtration.

Claim 18 (Currently amended): The process according to claim 16 1, wherein the crystallization solvent comprises a lower alcohol.

Claim 19 (Currently amended): The process according to claim 16 1, wherein the crystallization solvent comprises isopropanol.

Claim 20 (Currently amended): The process according to claim 16 1, wherein crystallizing the compound is carried out at a temperature below room temperature and above the freezing point of the crystallization solvent.

Claim 21 (Currently amended): The process according to claim 16 1, wherein the crystallization solvent comprises isopropanol and crystallizing the compound is carried out at a temperature of from about 10°C to about -50°C.

Claim 22 (Currently amended): The process according to claim 16 1, further comprising re-mixing the crystallized compound with the crystallization solvent and repeating the crystallizing and the collecting at least once in sequential order.

Claim 23 (Currently amended): The process according to claim 1, wherein the protecting group-substituted tocopherol compound ~~comprises~~ is an ester, and wherein solvolyzing the ester comprises a reaction selected from the group consisting of acid-catalyzed hydrolysis and base-promoted hydrolysis.

Claim 24 (Currently amended): The process according to claim 1, wherein the protecting group-substituted tocopherol compound ~~comprises~~ is an ester, and wherein solvolyzing the ester comprises base-promoted hydrolysis.

Claim 25 (Original): The process according to claim 24, wherein solvolyzing the ester comprises reacting the ester with an aqueous solution of a basic compound selected from the group consisting of alkali metal hydroxides, alkaline earth metal hydroxide, ammonium hydroxide, and metal hydrides.

Claim 26 (Original): The process according to claim 25, wherein the basic compound comprises an alkali metal hydroxide.

Claim 27 (Original): The process according to claim 25, wherein the basic compound comprises sodium hydroxide.

Claim 28 (Original): The process according to claim 24, wherein the hydrolysis is carried out in the presence of an alcohol solvent.

Claim 29 (Original): The process according to claim 28, wherein the alcohol solvent comprises isopropanol.

Claim 30 (Original): The process according to claim 24, wherein the hydrolysis is carried out in the presence of a reducing agent.

Claim 31 (Original): The process according to claim 30, wherein the reducing agent comprises sodium borohydride.

Claim 32 (Original): The process according to claim 15, wherein the hydrolysis is carried out under reflux conditions.

Claim 33 (Currently amended): A process for producing a color-stable, low-impurity tocopherol compound or mixture of tocopherol compounds, said process comprising:

Appl. No.: 10/626,281

Amendment dated May 2, 2005

Reply to Office Action of November 1, 2004

- (a) providing an acetate of a natural-source tocopherol compound;
- (b) crystallizing the acetate of the tocopherol compound from a solvent comprising isopropanol and collecting a purified acetate of the tocopherol compound; and
- (c) reacting the purified acetate with an aqueous solution of sodium hydroxide in isopropanol under a nitrogen atmosphere at reflux conditions to form free tocopherol, in the presence of a reducing agent comprising sodium borohydride.

Claim 34 (Original): A process for purifying a tocopherol, said process comprising:

- (a) providing a starting material comprising a tocopherol compound;
- (b) reacting the starting material with a protecting group to form a reaction mixture comprising a protecting group-substituted tocopherol compound;
- (c) separating the protecting group-substituted tocopherol compound from the reaction mixture to form a purified protecting group-substituted tocopherol compound; and
- (d) solvolyzing the purified compound to form a free tocopherol.

Claim 35 (Currently amended): A process for purifying a tocopherol, said process comprising:

- (a) providing an ester of a tocopherol compound,
- (b) reacting the ester with an aqueous solution of a basic compound in an alcohol solvent under an inert atmosphere to form free tocopherol, in the presence of a reducing agent.

Claim 36 (Original): A composition comprising a natural tocopherol compound, wherein the composition has a color-stability such that the composition has a Gardner color value of less than about 6 after 24 hours at a temperature of up to about 60°C.

Claim 37 (Original): A composition comprising a color-stable, natural tocopherol compound, wherein the composition has an *I*-tocopherol content less than about 0.75% and a total non- α -tocopherol content of less than about 2%.

Appl. No.: 10/626,281

Amendment dated May 2, 2005

Reply to Office Action of November 1, 2004

Claim 38 (Original): A composition comprising a color-stable, natural tocopherol compound prepared by a process according to claim 1.

Claim 39 (Original): A composition comprising a color-stable, natural tocopherol compound prepared by a process according to claim 34.

Claim 40 (Original): A composition comprising a color-stable, natural tocopherol compound prepared by a process according to claim 35.
